USE & MAINTENANCE

Maintenance materials

Metalli / Metals

Alluminio: Grazie alla fusione di più leghe di alluminio che ne garantiscono solidità, maneggevolezza ed inattaccabilità alla ruggine, è un materiale di elevata qualità e permette di raggiungere i massimi risultati qualitativi ed estetici.

Inox: L'acciaio inossidabile è un materiale che, grazie alla sua alta resistenza alla corrosione e alle caratteristiche meccaniche di rilievo, risulta maggiormente duraturo e affidabile nel tempo.

Acciaio: Lega di ferro e carbonio con percentuale di carbonio inferiore al 2% trattata per resistere agli agenti atmosferici con il processo della cataforesi e verniciatura a polvere.

Manutenzione: Per mantenere a lungo il prodotto in buone condizioni, consigliamo una corretta pulizia periodica, particolarmente frequente in località caratterizzate da forte umidità e clima marino. Si raccomanda di pulire le superfici con un panno morbido utilizzando acqua o detergenti neutri. Prolungate ed ininterrotte esposizioni a intense radiazioni UV o a temperature molto rigide possono incidere sulle caratteristiche iniziali del rivestimento estetico colorato costituito da poliestere. Consigliamo di pulire e conservare in luoghi riparati i prodotti durante periodi d'inutilizzo prolungato e invernali.

Aluminum: Thanks to the fusion of several aluminum alloys that guarantee solidity, manageability and rust resistance, it is a material of high quality and allows to reach the maximum qualitative and aesthetic results.

Inox: Stainless steel is a material that, thanks to its high resistance to corrosion and to the mechanical characteristics of relief, is more durable and reliable over time.

Steel: Iron and carbon alloy with carbon percentage less than 2% treated to resist to the atmospheric agents with the cataphoresis process and powder coating.

Maintenance: To keep the product in good condition for a long time, we recommend a regular cleaning period, particularly frequent in places characterized by high humidity and marine climate. We recommend cleaning the surfaces with a soft cloth using water or neutral detergents. Prolonged and uninterrupted exposures to intense UV radiation or at very low temperatures can affect the initial characteristics of the colored polyester coating. We recommend cleaning and storing products in sheltered areas during long periods of non-use and winter.

Maintenance materials

Legni / Wood

Teak: Materiale di elevata qualità ideale per la realizzazione di mobili da esterno perché estremamente resistente ai cambiamenti di temperatura, all'acqua, all'umidità e alla salsedine.

Accoya è una nuova varietà di legname di eccezionale durabilità, questo legno dalle elevate prestazioni viene prodotto con materie prime sostenibili e gestite in maniera ottimale, non è tossico ed è inoltre dotato di una stabilità dimensionale e di una durabilità in grado di superare quella dei migliori legni duri tropicali.

Trattandosi di un materiale naturale si potrebbero osservare variazioni di colore o anche crepe dovute al grado di umidità ed ai bruschi cambiamenti di temperatura. Qualora non ricevesse alcun trattamento di manutenzione, mediante l'applicazione periodica di comuni e specifici protettivi a base olio, la superficie potrebbe prendere una patina grigio argento che potrà essere eliminata con una leggera carteggiatura superficiale e successiva lucidatura con panno di iuta. Piccole macchie superficiali dovute ad olio o altri prodotti alimentari dovranno essere rimosse tempestivamente, prima che il legno possa assorbirle in profondità, carteggiando la superficie interessata e lucidandola successivamente con un panno di iuta

Teak: High quality material suitable for outdoor furniture because it is extremely resistant to changes in temperature, water, humidity and saltiness.

Accoya is a new variety of wood characterized by an exceptional durability. This wood shows very good performances and is produced with sustainable raw material, managed in an optimal way. It is not toxic and it has got a dimensional stability. Its durability is much higher than the one of the best hard tropical wood.

Being a natural material, colour variations or even cracks due to the degree of humidity and sudden changes in temperature may be observed. If no maintenance treatment is received, through the periodic application of common and specific protective oil-based, the surface may take a silver-gray patina that can be easily removed with a light surface sanding down and subsequent polishing with a jute cloth. Small superficial stains due to oil or other food products must be removed promptly, before the wood can absorb them in depth, sanding down the affected surface and then polishing it with a jute cloth.

Fiberglass

Per la pulizia della fibra di vetro utilizzare un panno morbido e sapone neutro. Evitare prodotti abrasivi o acidi, che potrebbero danneggiare la superficie. Asciugare subito per prevenire aloni o macchie con un panno in microfibra.

For cleaning the fiberglass use a soft cloth and mild soap. Avoid abrasive or acid products, which could damage the surface. Dry immediately to prevent stains with a microfiber cloth.

Cinghie elastiche / Elastic belt

Ottenute mediante la tessitura di materiali sintetici studiati per permette di essere usata all'esterno.

Si consiglia di evitare il contatto prolungato con sostanze grasse e/o coloranti che potrebbero venir assorbite dal materiale di rivestimento e dare luogo, di conseguenza, a macchie permanenti e rischiare di deteriorare la struttura del filato.
Si consiglia di evitare l'utilizzo di solventi.
Utilizzare acqua e detergenti liquidi non abrasivi con PH neutro ed incolori.

Obtained through the weaving of synthetic materials especially conceived outdoor use.

We recommend to avoid prolonged contact with greasy substances and / or dyes which could be absorbed by the covering material used and consequently cause permanent stains and risk to deteriorate the structure of the yarn. It is advisable it is suggested to avoid the use of solvents. Use water and non-abrasive liquid detergents with neutral PH and colourless.

Maintenance materials

Pietra lavica / Lava stone

Lava è un materiale robusto, consistente e di facile manutenzione realizzato smaltando artigianalmente lastre in pietra lavica o in gres. È un processo che unisce tecnologia e tradizione artigianale in cui vengono sapientemente bilanciati tempo e temperatura, donando inaspettate particolarità alla superficie. I colori, trasparenti e luminosi, applicati con processi manuali, permettono di cogliere, fra le loro sfumature, la porosità e le imperfezioni della pietra. Le lievi variazioni di spessore e tonalità di colore sono quindi valori di prestigio che rendono ogni prodotto unico.

La cottura ad alte temperature ed il vetro, completamente riciclato tramite un esclusivo processo di frantumazione e macinazione, migliora la superficie nelle sue caratteristiche tecniche, capace di rispondere a tutte le esigenze del vivere l'esterno.

Lava is a robust, consistent and easy-to-maintain material made by hand-glazing lava stone or stoneware slabs. It is a process that combines technology and traditional craftsmanship in which time and temperature are wisely balanced, giving unexpected peculiarities to the surface. The colors, transparent and bright, applied with manual processes, allow to capture, among their shades, the porosity and imperfections of the stone. The slight variations in thickness and color shades are therefore prestige values that make each product unique.

The firing at high temperatures and the glass, completely recycled through an exclusive crushing and grinding process, improves the surface in its technical characteristics, able to meet all the needs of outdoor living.

Gres / Stoneware

Il gres, grazie alle sue eccellenti proprietà fisiche e meccaniche, risulta essere ideale per uso esterno, essendo inattaccabile dagli agenti atmosferici e inalterabile ai raggi UV. Grazie all'utilizzo di materiali puri compattati tra loro ad alte temperature, senza l'aggiunta di resine sintetiche, il gres risulta molto resistente agli urti e alla flessione.

Per la pulizia dei piani in gres si consiglia l'utilizzo di un panno inumidito con acqua e detergente neutro da risciacquare ed asciugare con un panno asciutto. Nella fase di lavaggio porre particolare attenzione al fine di evitare l'accumulo di sporco o calcare.

Porcelain stoneware, thanks to its excellent physical and flexural strength, turns out to be ideal for outdoor use, being unaffected by atmospheric agents and unalterable to UV rays. This material is obtained through the synthesis process of ceramic clays, feldspars, kaolins and sand.

For the cleaning of stoneware tops it is advisable to use a damp cloth with water and a neutral detergent to be rinsed and dried with a dry cloth. During the washing phase, pay particular attention to avoid the accumulation of dirt.

Maintenance materials

Cemento / Concrete

Il cemento è un materiale naturale e, in quanto tale, durante il suo processo produttivo possono verificarsi leggere sfumature e variazioni delle tonalità dell'impasto cementizio, che caratteristica portante del materiale e della tecnologia. Le fibre sono una componente dell'impasto cementizio e conferiscono al cemento Ductal la sua estrema resistenza e flessibilità. Se la finitura scelta è molto levigata, le fibre possono intravedersi sulla superficie e devono essere accettate come caratteristica intrinseca alla finitura.

I piani in cemento, specialmente di grandi dimensioni, non sono perfettamente planari a causa della natura stessa del materiale e della sua lavorazione artigianale.

Micro cavillature da ritiro, devono essere accettate come fenomeno naturale della lavorazione del materiale.

Piccoli fori e bolle possono apparire sulla superficie dei prodotti in cemento. Essi sono una naturale conseguenza del processo produttivo e parte integrante delle caratteristiche del materiale. Il loro aspetto e la loro quantità varia da finitura a finitura. I fori inferiori a 4 mm di diametro vengono lasciati tali, mentre di norma vengono stuccati quando superano il diametro di 5 mm.

Il cemento è un materiale poroso che tende ad assorbire i liquidi che entrano in contatto con la sua superficie, per questo va protetto con dei prodotti appositi; antidegrado ed antimacchia. È importante quindi evitare il ristagno dei liquidi sui piani e specialmente il contatto prolungato tra cemento e oggetti bagnati quali vasi, bottiglie, bicchieri o teli di plastica: una non corretta evaporazione dei liquidi può causare infatti macchie difficilmente removibili dai manufatti.

Eseguire una pulizia superficiale con l'utilizzo di una soluzione di acqua e detergente neutro con basso contenuto di cera (es. prodotti per pavimenti in marmo). Per macchie insistenti, è possibile utilizzare soluzioni che contengono ammoniaca/candeggina diluita al 10%, cioè 1 parte di candeggina su 10 parti di acqua.

Cement is a natural material and due to its nature it may present slight nuances and variations in its combination, which is a key characteristic of the material and production technology.

Fibres are a component of the cement mix and give the Ductal cement its extreme strength and flexibility.

If the chosen finish is highly polished, fibres may be visible on the surface and must be accepted as an intrinsic feature of the finish.

Cement top and flat surfaces, especially the large ones, are not perfectly flat due to the nature of the material and its craftsmanship.

Micro shrinkage cracks must be accepted as a natural phenomenon of the material's workmanship.

Small holes and bubbles may appear on the surface of cement products. They are a natural consequence of the production process and an integral part of the material's characteristics.

Their appearance and quantity varies from finish to finish.

Holes smaller than 4 mm in diameter are left as they are, while they are normally grouted when they exceed 5 mm in diameter.

Cement is a porous material that tends to absorb liquids which get in contact with its surface, which is why it must be protected with special products such as anti wear sealant and Anti stain sealant. It is therefore important to avoid the stagnation of liquids on the surfaces and especially the prolonged contact between cement and wet objects such as vases, bottles, glasses or plastic sheets: incorrect evaporation of liquids can cause stains that are difficult to remove.

Clean the surface with water and neutral detergent with a low content of wax (for ex. marble flooring products). Stubborn stains can be cleaned by using a solution containing 10% diluted ammonia/bleach, which is 1 part bleach for 10 parts water.

Maintenance materials

Pietra / Stone

Una delle pietre più pregiate e maggiormente impiegate in outdoor è sicuramente il marmo.

Il marmo, grazie alla sua particolare composizione e natura, è una pietra poco porosa e poco assorbente, durezza e resistenza, fanno del marmo una tra le pietre più pregiate e durevoli nel tempo.

La formazione del marmo avviene mediante un processo metamorfico di cristallizzazione: il carbonato di calcio, venendo in contatto con le rocce sedimentarie, dà vita ad un insieme di cristalli di calcite e minerali vari, i quali ne determinano il colorito.

Per mantenere la lucentezza del marmo e del granito è necessario detergere giornalmente le superfici: è sufficiente diluire il sapone neutro in acqua tiepida.

Le superfici dovranno essere strofinate per mezzo di una spugna o un panno morbido. Sarà sufficiente risciacquare con un panno umido, prestando attenzione a non lasciare i fastidiosi aloni di detergente.

Marble is certainly one of the most precious and used stones for the outdoor.

Marble, thanks to its particular composition and nature, is a little porous and not absorbing stone, hardness and resistance, making marble one of the most precious and durable stones in time.

The marble formation takes place by means of a metamorphic crystallization process: calcium carbonate, coming into contact with the sedimentary rocks, gives rise to a set of crystals of calcite and various minerals, which determine the complexion.

To maintain the shine of marble and granite it is necessary to clean the surfaces daily: it is sufficient to dilute the neutral soap in warm water.

The surfaces must be rubbed with a sponge or a soft cloth. It will be sufficient to rinse with a damp cloth, being careful not to leave detergent stains.

Fibra wicker / Wicker fiber

La fibra wicker è un materiale sintetico che riproduce l'aspetto del midollino, con il valore aggiunto di essere completamente resistente agli agenti atmosferici e al passare del tempo. Una delle caratteristiche distintive della fibra wicker è il suo intreccio, realizzato meticolosamente a mano. Questo processo artigianale richiede grande attenzione ai dettagli, in modo da garantire non solo la resistenza e la durata del materiale, ma anche un'estetica che trasmette calore e artigianalità. Ogni filo, con un diametro di 2mm, viene intrecciato con precisione per creare una trama irregolare, che risulta particolarmente confortevole e piacevole al tatto. Questa cura nella lavorazione a mano conferisce un carattere unico a ogni prodotto realizzato con la fibra wicker, combinando tradizione e innovazione per ottenere elementi dall'aspetto naturale ma dalla straordinaria leggerezza e resistenza, specialmente quando accoppiata a strutture in alluminio.

Per la pulizia e manutenzione ordinaria, è consigliato lavare la fibra con acqua a pressione, utilizzando una spugna non abrasiva e un sapone delicato oppure una spazzola a setole morbide per raggiungere meglio gli spazi tra gli intrecci. È importante evitare l'uso di strumenti che possano graffiare la superficie della fibra. Lasciare asciugare la corda al sole e ricoprire con i cuscini solo quando è completamente asciutto.

Wicker fibre is a synthetic material that reproduces the look of wicker, with the added value of being completely resistant to weather and time. One of the distinctive features of wicker fiber is its meticulously hand-crafted weaving. This artisanal process requires great attention to detail, so as to ensure not only the strength and durability of the material, but also an aesthetic that conveys warmth and craftsmanship. Each wire, with a diameter of 2mm, is precisely braided to create an irregular weave, which is particularly comfortable and pleasant to the touch. This care in the hand-made process gives a unique character to each product made with wicker fiber, combining tradition and innovation to obtain elements of natural appearance but extraordinary lightness and resistance, Especially when coupled to aluminium structures.

For ordinary cleaning and maintenance, it is recommended to wash the fiber with water under pressure, using a non-abrasive sponge and mild soap or a soft bristle brush to better reach the spaces between the weaves. It is important to avoid using tools that can scratch the surface of the fiber. Let the rope dry in the sun and cover with cushions only when it is completely dry.

Then use a soft, non-abrasive sponge and a household detergent, wash the surface with the detergent and rinse with warm water, at the end dry thoroughly.

Maintenance materials

100% polyethylene

Il polietilene è un materiale plastico molto adatto all'arredo esterno. Ha una superficie particolarmente pratica, lavabile, resistente ai raggi UV e agli agenti atmosferici nel corso del tempo. Ha un' elevata resistenza agli urti, una resistenza eccellente alla corrosione e ai prodotti chimici.

Non è penetrabile da liquidi come acqua, soluzioni saline o alcool.

Non utilizzare acidi ossidanti, quali acido Nitrico, acido solforico o alogeni.

Polyethylene is a plastic material that is perfectly suitable for outdoor furniture. Its surface is particularly practical, washable, UV and weather-resistant over the time.

Not penetrable by liquids such as water, salt solutions or alcohol, this material stands out also for its high-impact resistance and its excellent resistance to corrosion and chemicals.

Do not use oxidising acids, such as nitric acid, sulphuric acid or halogens.

100% polyethylene tech

Il poliuretano Tech è un poliuretano strutturale quindi non necessita di alcuna struttura metallica interna. È un materiale ad alta densità (600-700 Kg/m³) che permette di realizzare qualsiasi forma, con spessori anche molto sottili.

Ha un'elevata resistenza agli urti, ben superiore a quella dei tradizionali rigidi strutturali, mantenendo comunque una gradevole elasticità in termini di comfort. Ha una buona resistenza al graffio.

Pulire le sedute in poliuretano è molto semplice, pratico e veloce.

Per prima cosa è necessario rimuovere lo sporco dalla seduta, per garantire la durata dei prodotti pulisci le superfici utilizzando solo acqua tiepida e sapone neutro.

Non utilizzare solventi aggressivi come l'acetone o detergenti a base di benzine e alcalini che possono aggredire chimicamente il materiale compromettendone estetica e integrità strutturale.

The polyurethane Tech is a structural polyurethane, therefore it does not need any inner metallic structure.

Is a high density material (600-700 Kg/m³) that enables to make any shape with very thin designs.

Tech has a high shock resistance, much higher if compared to traditional structural rigid PU, keeping at the same time a good elasticity in terms of seating comfort. It has a good resistance to scratches too.

Cleaning polyurethane seats is very simple, practical and fast.

First of all, it is necessary to remove the dirt, then you must moisten a cloth with water and with a suitable specific product that is not too aggressive. To ensure the durability of the products, clean the surfaces using only warm water and neutral soap.

Do not use aggressive solvents such as acetone or petrol and alkaline based detergents which can chemically attack the material compromising its aesthetics and structural integrity.
